

A faster Adobe Reader in six easy steps!

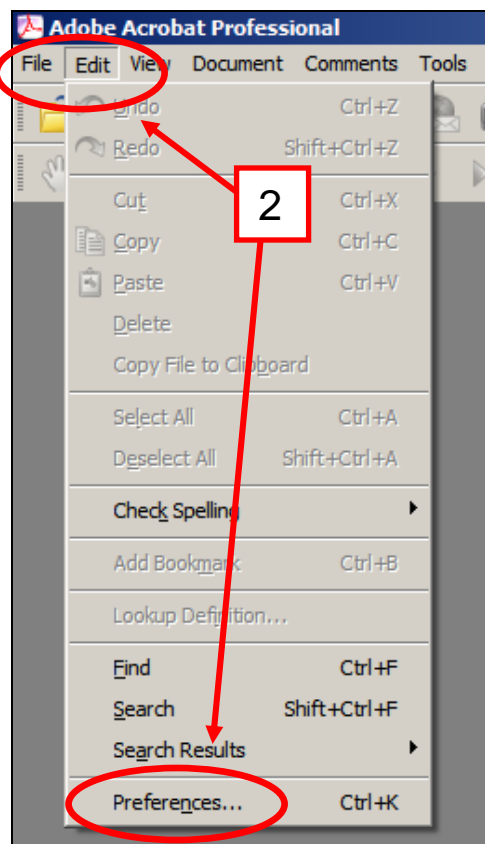

- Using High Speed Internet (LAN, DSL, or Cable Modem)?
- Adobe Reader loading slowly?

(NOTE: Changing these settings will **NOT** speed up a 56Kbps dial-up connection,)

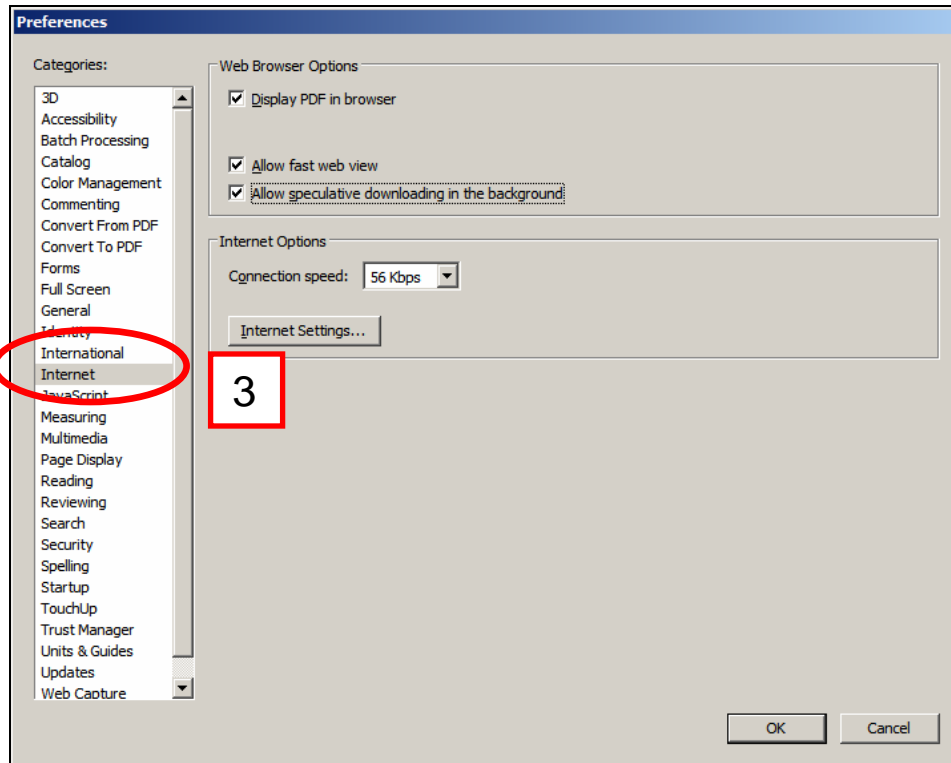

1. Open Adobe Reader or Adobe Professional (usually from Start menu).

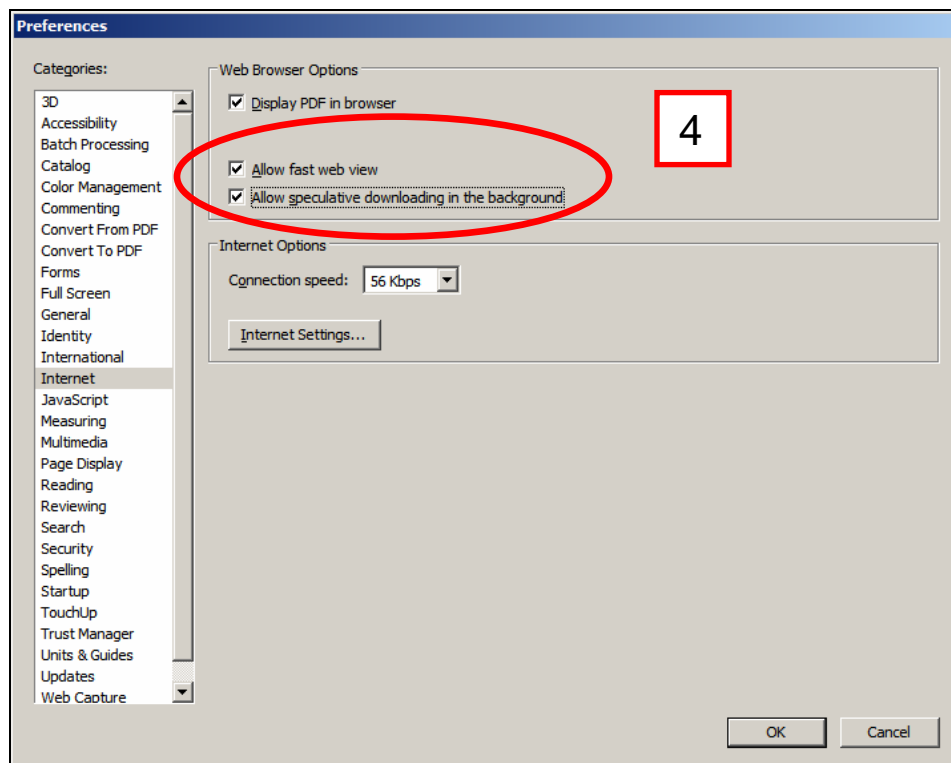

2. Click on "Edit" on the menu, and select Preferences on the dropdown menu.

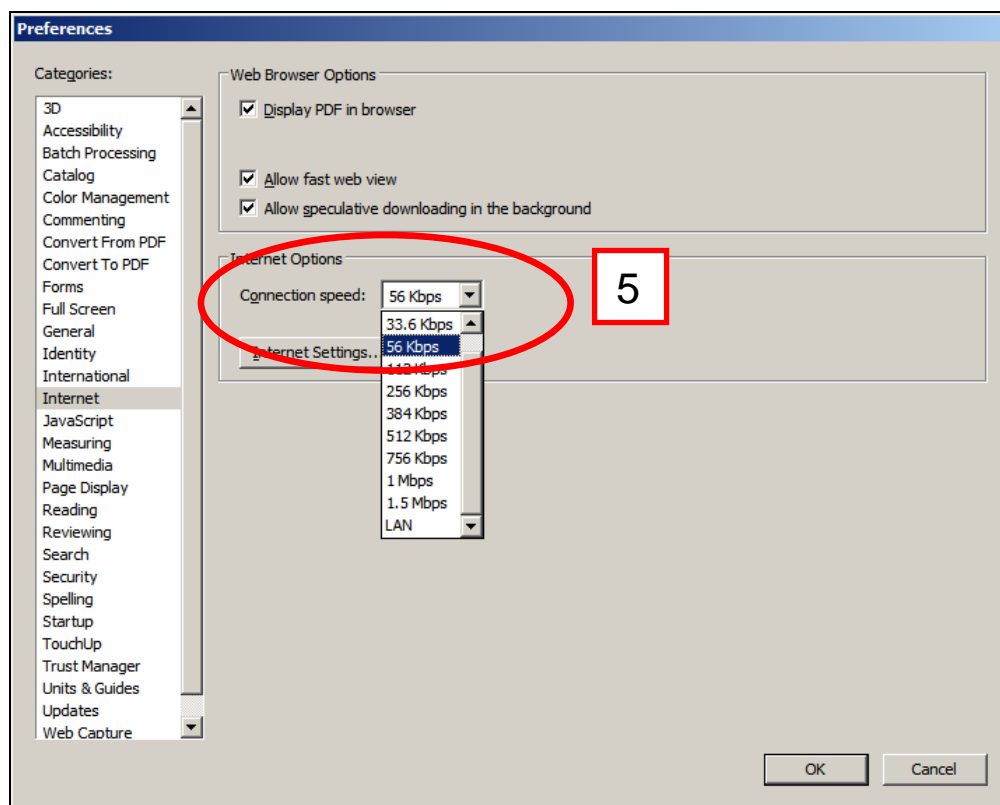

- Click on “Internet” under the Categories: listing.

- Uncheck (or verify unchecked) two boxes:
 - * “Allow fast web view”
 - * “Allow speculative downloading in the background”

5. Select the appropriate high speed connection from the “Connection speed:” dropdown menu located in the Internet Options section.

6. Click the OK button to save your settings. You're done!
